ASAP is a proven Agile delivery methodology developed by Singularity, based on the generic Scrum framework. It incorporates a number of recognised best practices from across the agile community, as well as our unique Hot Housing approach to requirements elicitation.

During this one day workshop each attendee will gain practical insight on how ASAP (Agile Singularity Accelerated Process) employs Agile concepts and techniques that will educate and equip individuals to allow them to be productive in their role as part of an Agile team.

This interactive course provides a firm grounding in the basic practices and skills required to make an Agile ASAP project successful, as it is underpinned by practical exercises illustrating the agile concepts.

BOOT CAMP OBJECTIVES

Whether you're an Agile novice, or looking for best practice tips and tricks to fine tune your Agile projects, this course is for you. Our foundation 1 day intensive course introduces your team to the "What", "Why" and "How" behind Agile and ASAP and offers real world examples from Singularity's own agile practitioners.

COURSE SYLLABUS

- What is Agile Software Development?
- Overview of Singularity's ASAP Agile Method
